The various layers, including Layer and layer groups, are explained in detail, and some tips on working with layers, including tips for accomplishing tasks without the use of the Layers panel, are presented in this chapter. Here are some more details about layers and layer groups: * A layer is a blank, white, rectangular area on a background layer that can be filled with any color or line pattern, or can hold any type of object that can be placed on a new layer. You work with layers that can hold objects by using layer masks. (To learn more about working with layers, see Chapter 5.) * Layers can be grouped to show all the layers in one window for easier handling. You can create a group layer and move the group layer. * * * # Covering the Layers Panel The Layers panel, shown in Figure 2-1, helps you manage the various types of layers that you create. You access the Layers panel with either the Window tool or the arrow keys. Use the following steps to open the Layers panel: 1. **From the Layers panel menu, select Window.** The Layers panel appears with the current active layer at the top of the panel, with layer properties on the left side of the panel and layer tools on the right side. 2. **With the current active layer selected, choose Window from the Layers panel menu.** The Layers panel appears, with the active layer shown at the top, as shown in Figure 2-1. You can choose any layer to which you want to add an effect, such as a layer mask, or a layer that's been saved to the Stack panel to make a new layer. To add a layer to the current image or to a new document, click the image thumbnail or the New Document button at the bottom of the panel, respectively. 3. **Create a new layer by clicking the New Layer icon, located at the left side of the Layers panel.** The icon is outlined in a green square. * Click the New Layer icon or press

A radical medical marijuana concept is leading a growing number of doctors to offer cannabis treatments to cancer patients, and many centers worldwide are developing new, safer cannabis-based options for the drug-resistant cancer patients who need them. The new way of using marijuana to treat some cancers, dubbed cannabis medicine, is being offered in an array of research studies worldwide, according to the researchers. Many patients are finding it easier to take than chemotherapy and far less prone to the side effects of radiation and narcotics. "I'm seeing a situation where cannabis medicines are used as a first-line treatment," said Dr. Andrew Fowler, a British oncologist, who is testing cannabis on mice with Hodgkin's lymphoma and applying that knowledge to treat his own patients. Fowler said that for his patients with stage 3 cancer, cannabis can ease symptoms such as nausea, pain, and loss of appetite. Cannabis "is a very rational treatment" and "has the potential to be an effective monotherapy for some cancers," Fowler said. "But I am skeptical about cannabis as a first-line treatment for most cancers." In recent years, scientific reviews of evidence on cannabis' medical uses have concluded that it's effective for treating a variety of conditions, including anxiety, depression, pain, and nausea from chemotherapy. Many states have legalized cannabis for medical purposes and more are considering legalizing it for recreational use. The popularity of using cannabis in medicine has been limited because of restrictions on how marijuana can be prescribed, how scientists can study it, and how patients can obtain it. "If we can take marijuana out of the realm of this being a controlled substance, where the production of the drug has a whole different set of regulations, there are fewer concerns about abuses," said Dr. Serena Romaniello, assistant professor of otolaryngology at Emory University School of Medicine in Atlanta. American Society of Clinical Oncology (ASCO) guidelines say marijuana is not a first-line treatment for cancer. But the society says there's "moderate" evidence to support its use for nausea and vomiting, neuropathic pain, and certain symptoms of multiple sclerosis. While the FDA is promoting clinical trials for cannabis, the agency has not approved any cannabis products, including cannabis oil, for the purpose of treating cancer or any other serious condition. The number of American cancer patients who are using medical marijuana has increased

substantially, from 4 million in 2014 to 5.5 million in

What's New In Photoshop CC 2015 Version 17?

Q: ∞ does not have an immediate predecessor? A theorem in my class says: If a is a limit point of a set S, and there is a collection $\{U_\alpha\}$ of open sets such that: $a\in\bigcup_{\alpha}U_\alpha$, a does not have an immediate predecessor in $S\backslash\bigcup_\alpha U_\alpha$, then $S\backslash\{a\}$ is an open set. I know what a predecessor is, but I don't see why the above can't be true. Can someone explain? A: As joriki mentioned in his comment, a point is immediate predecessor iff it is an accumulation point. I'm adding the following. Consider $a = \frac{1}{3}$ and $S = [0, 1]$. Let $U = \bigcup_{n=1}^{\infty} \left(1 - \frac{1}{2^n}, 1 - \frac{1}{2^n + 1}\right)$, then 0 is an accumulation point of U. However, there is no $b \in S \backslash \{0\}$ such that b is an immediate predecessor of 0 in U. In fact, $\left[\frac{1}{2}, 1\right]$ is open and contains 0, but does not contain any accumulation point of U.
