The Elden Ring game is a fantasy action RPG developed by GUST and features the most precious tale of the Elden army in their journey for recovering their lost lands. The Elden army has arrived in the Lands Between, where the will of the remaining Elden folk is being transmitted to a new life. Meeting them on their way, you play as the Elden princes, knights, mages and more as you fight along their path to help them achieve their goal. To make sure you're up to the task, make sure to harness your Might and Magic by levelling up as you explore the vast fields of the game world. At the same time, you can team up with other players to explore the game world and share your adventures with others. While the story may take on many forms, Elden Ring has some typical elements that help it to stand out from the crowd. ♦ Creative and Deep Combat: A wide variety of fighting styles can be mixed and matched to form an unlimited number of combinations, giving you an edge in combat that can reach up to Level 99. ♦ Generate New Skills as you Level Up: As you level up you are able to generate new skills (shown in the Skill Tree) by synthesizing the items you collected in your journeys. The most commonly used techniques for removing coatings from substrates involve multiple steps comprising physical cleaning, solvent cleaning and chemical stripping. Physical cleaning is performed by abrading the coated substrate surface with abrasive materials such as alumina, silicon carbide, aluminum oxide or diamond. Most of these techniques require careful control of parameters such as the solid:liquid ratio of the slurry, pressure, velocity and temperature to avoid overspray or adhesive damage to the underlying substrate. An example of this technique is disclosed in U.S. Pat. No. 5,576,850, where alumina particles are injected against a surface to be abraded at a predetermined pressure to remove a protective coating. The second commonly used technique involves the use of stripping solvents such as halogenated hydrocarbons, aromatic hydrocarbons or ketones. These solvents are capable of dissolving the surface coating and are subsequently removed at elevated temperature. Such a technique is disclosed in U.S. Pat. No. 5,656,384, where a solution of potassium or sodium hydroxide is used to dissolve the surface coating and a solvent such as trichloroethylene (TC

In the somewhat distant future of the Year 6175, the civilization of the golden Land known as the Elden Ring has long since been conquered by the oppressive force of the United Nations. A year has since passed, and peace has been maintained by the United Nations back under the rule of the centaur kingdom known as the Union. The world peace that has been secured has seen children no longer die during childbirth, and people no longer suffer from famine in their homeland. Life has become stable and calm, and people have begun to live in harmony with the world. Things are going well for the country, but humanity's dark passions are gradually starting to appear in the middle- and upper-class segment of society. Each year more and more persons of small stature grow to be the target of hatred and abuse. Similarly, the ferocious enjoyment of augmentation is spreading, with the result that the bounds between human and machine have become clearly distinguished. Meanwhile, from within the newly created Hell Gate, a group led by a magus of shallowness, Craft, and a high-ranking augur, Arm, with the end of the world as a target, are agitating society. "Abuse the esteemed technology and the society of children and maids will be at an end. Block the uncontrollable and unstoppable technologies of the world, and people will be restored to paradise." Such a person is Craft! Born on May 30, 1976, as the daughter of Labaurus, this same person, as
