How to connect emule to kademia network epw.kad.jabber, kademia, network, list, dht, eMule Add Server: Enter a URL to establish a connection to the server. The URL is a location on the network: "/server1/emule.zip". No need to download the file first. This can be done at any time. Usually the download speeds are fast, because the file is already present on the server (as a M:N file). Multiple Server If you want to download from more than one server then use the multiple servers option, which is located on the settings menu. If you use this option, all the servers are displayed in the list. Download Enter the files you want to download in the list below. The download will start when the first file is completed. Kademia With eMule you are using the Kademia network. The file is located on another computer on the network. Nodes List Once the files are done, you can use the Nodes List function. Stop With eMule you can stop the download. However, because this is a binary file, it will remain on your hard drive. If you use the "stop" function of the eMule client, the file will be deleted. You can do this manually by unzipping the file. Hide Downloads You can hide the download folders. This helps you to prevent that others can see files and folders that you want to hide. How to download Emule server list from Kademia network Download Emule server list from Kademia network.
